

Call for Chapters for Edited Book

Applying Mobile Technologies in Transforming Library Services: Issue and Challenges

About the Book:

Currently, Information and Mobile technologies rapidly changed the information delivery methods for libraries and information centre's from print to digital mode. This book mainly focuses on applying mobile technologies in libraries to the 24x7 delivery of information services on mobile devices for optimum utilize of library collections and services by library patrons. In the digital era, most library patrons own mobile devices (smartphones, iPods, notebooks, tablets, and laptops, etc) using it for performing several tasks anywhere, anytime. They want to use their own mobile devices in and around the library campus. This book covers the Mobile technologies revolution, mobile technologies standards, implementing mobile technologies in libraries, QR code/Smart card applications, Mobile apps practices, the case studies of mobile-based library services, and issues & challenges related to mobile technologies application in Indian University
